## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 31 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dillon et al (US # 4,815,547) in view of Matteau et al (US # 4,788,930) and Angel (US # 4,800,973). Dillon discloses a weighing apparatus comprising a plurality of load cells (20), a means for receiving a load supported by said load cells (125), a means associated with each load cell to supply a digital representation of the load on each load cell (100), and a means for supplying correction coefficients for each load cell (Col. 6, lines 27-40). Dillon disclose the claimed invention except he does not expressly state that the load cells are calibrated, or "corrected", by using the technique of varying the gain of the signal amp; in fact, it is not clear exactly how the "correction coefficients" are used to calibrate the load cell signal. However, it is a well know calibration technique to calibrate a load cell by using some type of variable gain amplifier for the strain gage amp as shown by the examples of Matteau (Col. 3, lines 41-45) and Angel (Col. 9, lines 23-25). A variable gain amp is easily adjustable by tuning a variable resistor (I.E.: "potentiometer") which has been placed in series connection between one of the input terminals and the output terminal of a standard operational amplifier integrated circuit:

Application/Control Number: 10/774,846 Page 3

Art Unit: 2841

this potentiometer, as is known in the art, can be either manually or digitally tuned. It would have been obvious to use a variable gain amp in the device of Dillon to provide the desired correction for the weight signals motivated it its art recognized suitability for it's intended use. See *Ryco, Inc. v. Ag-Bag Corp.*, 857 F.2d 1418, 8 USPQ2d 1323 (Fed. Cir. 1988); and, *MPEP* § 2144.07.

## Conclusion

3. Applicant's arguments with respect to claim 31 have been considered but are most in view of the new ground(s) of rejection. Claims 1 & 4-30 are allowable for the reasons stated in the previous action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Randy W. Gibson whose telephone number is (571) 272-2103. The examiner can normally be reached on Mon-Fri., 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kamand Cuneo can be reached on (571) 272-1957. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
